Remote Control Operation Manual - Air Fuel Ratio Gauge

This document will assist you in operating your remote control.
If you have any questions, please email **support@podi.ca.**

Tips for remote control operation:

1. Please have the remote control pointing to the gauge you are going to set up.

2. The gauge dial will flash when you press a button to acknowledge the command to enter a mode.

3. To save settings, press (SET) or wait 5 seconds and the gauge will leave the setting mode and save automatically.

Color Setting:

1. Select Air Fuel Ratio Gauge by pressing (A/F) on the remote control.

2. Then press (RGB) to enter the color selection mode. Press the (RGB) button again to cycle through the different color combinations (if applicable). Press (SET) or wait 5 seconds to leave this setting mode.

Brightness Adjust Setting:

1. Select Air Fuel Ratio Gauge by pressing (A/F) on the remote control.

2. Then press (RGB) to enter the color selection mode. Press (▲) to increase the brightness or press (▼) to decrease. Press (SET) or wait 5 seconds to leave this setting mode.

Warning Value Setting:

Default setting = When same value is held for over 5 seconds, the WARNING (LED backlight will flash) will be activated.

Peak Value Recall:

1. Select Air Fuel Ratio Gauge by pressing (A/F) on the remote control.

2. Press (▲) to display peak value recorded, or press (▼) to clear the peak value recorded. Press (SET) or wait 5 seconds to leave this setting mode.
